

UNCONSCIOUS COGNITION STUDY

PARTICIPANTS NEEDED!

About the study

We are constantly exposed to a huge number of environmental stimuli such as sounds, colours, smells, and noise. Many of these stimuli have order to them – a sequential nature, appearing in the stimuli over and over again. We have the ability to learn complex information from these environmental regularities, however, due to the large amount of information we are constantly taking in, the knowledge of these environmental regularities are often not consciously accessible to us, i.e., they are implicit. One of the big questions regarding implicit cognition is whether or not different implicit processes are related to one another, or whether these different processes operate independently. This research will be attempting to answer this question and your help is needed!

**COMPENSATION
FOR YOUR TIME
– R50 CASH OR
AIRTIME**

WHERE?

**PSYCH LAB,
UKZN PMB
CAMPUS**

WHEN?

**THE WHOLE
YEAR (2017)**

**APPROXIMATE
LENGTH OF
EXPERIMENTS:
2 HOURS**

CONTACT

If you are interested in participating, please contact Nikolas via email nikolaspautz@gmail.com or WhatsApp (0619332700).
