DURBAN RESEARCH ACTION PARTNERSHIP (D'RAP)

Year-end Research Symposium:

Global Environmental Change Research Programme (GEC)

The eThekweni Municipality-University of KwaZulu-Natal Joint Research Partnership established the Durban Research Action Partnership (D'RAP) to bridge the science-action gap and to advance knowledge in biodiversity conservation and management, within the context of global environmental change. The partnership aims to generate both knowledge to assist managers in the Municipality in making biodiversity and conservation decisions, as well as, build capacity by supporting student research activities at the university.

The year-end research symposium is an opportunity for students to present on their research progress, as well as, invited guests to share their knowledge on climate change and biodiversity in a management context. This event also provides updates on the partnership. The GEC is currently in its third phase - "Rivers: source to sea" which will end this year. Presentations will be on this theme as well as some of the related initiatives linked to the programme.

The symposium will be virtual via Zoom. Please sign up with the link below to receive the link for attendance.

Please use the following link to sign up for the symposium:
