About the Seminar

This event aims to bring together researchers and students to explore and collectively develop ideas on the topics of pollinators and pollination, plant ecology and evolution, and their links to the Sustainable Development Goals and Agenda 2030.

Programme

- Welcome
- Vidushi Patel, University of Western Australia – Why bees are critical for achieving sustainable development (virtual)
- Margarita M Lopez-Urbe, Penn State University – Plant domestication and the ecology and evolution of wild pollinator species in agricultural landscapes (virtual)
- Timo van der Niet, University of KwaZulu-Natal – Evolutionarily inspired solutions to the crop pollination crisis
- Carolina Diller, Swedish University of Agricultural Sciences – Pollination and climate change
- Jeff Ollerton, University of Northampton – Pollinators and sustainability (virtual)
- Paul Egan, Swedish University of Agricultural Sciences – Closing summary on pollinators and the SDGs
